THE DANTERR DIFFERENCE

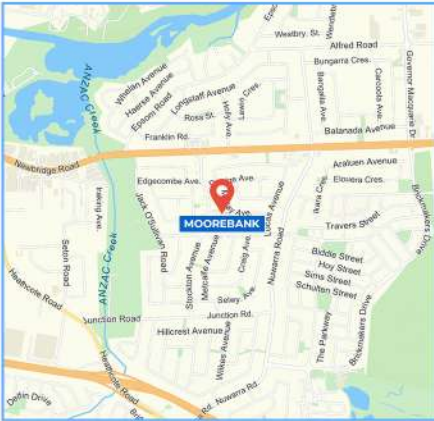

At Danterr, we're more than a supplier—we're a trusted partner in Australia's construction industry, delivering innovative, high-quality solutions since 1999. From sourcing premium materials locally and internationally to providing tailored support, we help contractors and construction specialists meet the demands of their unique projects with confidence.

Our commitment to excellence is built on passion, respect, reliability, honesty, and an unwavering focus on quality. We take pride in fostering strong relationships, offering solutions that prioritise safety, innovation, and sustainability.

When you choose Danterr, you gain a partner dedicated to elevating your projects and making a lasting impact on the construction landscape.

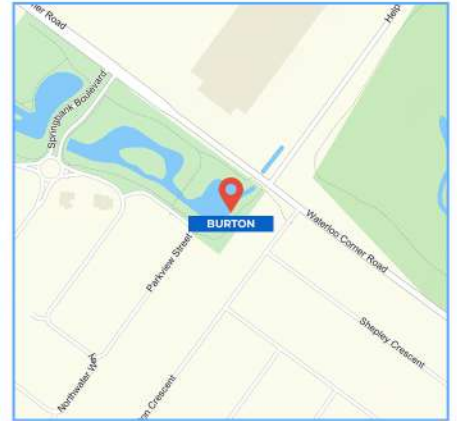

LOCATIONS

**SYDNEY WAREHOUSE:
MOOREBANK, NSW 2170**

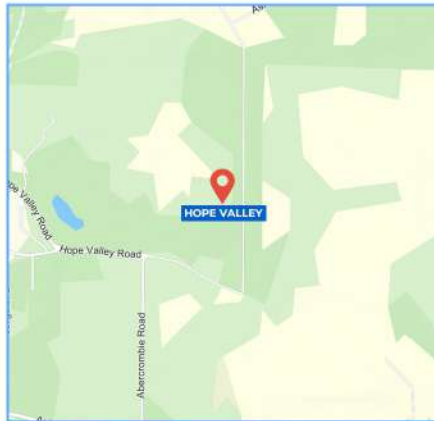

**MELBOURNE WAREHOUSE:
LAVERTON NORTH, VIC 3026**

**ADELAIDE WAREHOUSE:
BURTON, SA 5110**

**BRISBANE WAREHOUSE:
EAGLE FARM, QLD 4009**

**PERTH WAREHOUSE:
HOPE VALLEY, WA 6165**

DELIVERY AUSTRALIA WIDE

At Danterr, we know that time is critical in construction, and we're here to ensure your materials arrive where and when you need them. Our streamlined logistics and strategically located warehouses guarantee fast, reliable delivery, no matter your project's location.

- ✓ **SAME-DAY DISPATCH**
- ✓ **RELIABLE FLAT-RATE SHIPPING**
- ✓ **TRUSTED FREIGHT PARTNERS**

We don't just deliver products; we deliver peace of mind. From same-day dispatch to live tracking updates, we work tirelessly to keep your projects on track. No matter the distance or the urgency, Danterr has the capability, expertise, and commitment to get your order to you on time, every time.

(*Conditions apply based on stock availability and delivery schedules.)

CURING BLANKETS & WET CURING BLANKETS

Smart thermal and wet curing blankets designed to protect, preserve, and perform.

From heat-shielding thermal blankets to high-retention wet curing fabrics, Danterr delivers trusted solutions for reliable curing in all conditions. Maximise concrete strength, minimise cracking, and keep your project on schedule with products built for real-world construction challenges.

CONCRETE CURING BLANKET

Engineered for thermal insulation, this curing blanket helps concrete cure evenly in extreme hot or cold conditions. It reduces shrinkage cracking, accelerates curing, and is reusable across multiple pours.

Specs:

- Maintains even temps for consistent curing
- Reusable with eyelets for easy anchoring
- Available in 12mm thickness
- ASTM C518-17 certified

Sizes:

- 1.8x3m, 2x6m, 2.2x3m, 4x4m, 6x6m

ECOTHERM

A high-performance, dual-purpose curing blanket and insulation designed to meet NCC standards.

Specs:

- In-situ R-value: R0.20
- Reflective foil, closed-cell XPE core
- Size: Standard 7.8mm thickness

HESSIAN ROLLS

Sustainable and biodegradable, Hessian Rolls retain surface moisture to ensure a slow, strong concrete cure. Ideal for both precast and in-situ work, they reduce cracking while supporting green building practices.

Available in:

- 14 oz. (213gsm) or 18 oz. (305gsm)
- 1.83m width
- 50m rolls or 1,050m bales

BUILDERS FILM

Durable polyethylene sheeting used for concrete curing, vapour barriers, and surface protection across a variety of site conditions. Available in medium- and high-impact grades, it's manufactured to AU/NZ standards and supplied in 200um thickness for optimal strength and flexibility.

Available in:

- 4m x 50m rolls
- 200um thickness
- Medium or High Impact

CURING COMPOUNDS

Reliable moisture control for stronger, longer-lasting concrete.

Danterra's curing compound range helps concrete cure efficiently and evenly, reducing shrinkage and improving durability. With both Aardcure™ and Evencure™ options available, we offer AS3799-compliant solutions for every application—from overlays to after-trades.

AARDCURE AA EVAPORATION RETARDANT

A low-viscosity, water-soluble alcohol solution designed to reduce rapid moisture loss during finishing. Ideal for hot, windy, or low humidity conditions—keeps concrete workable and reduces plastic shrinkage without affecting hydration.

Available in: 20L, 200L

AARDCURE WAX

A sprayable wax-based membrane for curing large-scale pours like roadways, dams, and infrastructure. AS3799-certified with optional white pigmentation—doubles as a debonding agent if needed.

Available in: 20L, 200L, 1000L

AARDCURE BPP (BITUMEN PRIMER + CURING)

A dual-purpose bitumen emulsion that cures concrete and primes for asphalt/bitumen overlays in one pass. AS3799-compliant with 90%+ water retention—perfect for roads, bridges, and hardstands.

Available in: 20L, 200L, 1000L

AARDCURE WBS (WATER-BASED SEALER)

A versatile acrylic-modified curing compound and primer that dries clear and takes most after-trades. Water-based, low VOC, and AS3799 compliant—suitable for both indoor and outdoor applications.

Available in: 20L, 200L, 1000L

AARDCURE CATALYST (PRIMER & DURABILITY ENHANCER)

A penetrating chloride- and silicate-free solution that hardens, densifies, and increases concrete's resistance to abrasion, chemicals, and corrosion. Great for restoring degraded concrete or priming before overlays—extends lifespan by over 10 years.

Available in: 20L, 1000L

AARDCURE WHC (XDS)

Danterra's top-tier curing compound with densifiers for extended concrete life and surface performance. Self-degrading film requires no removal and meets AS3799 standards—available in clear, dyed, or white.

Available in: 20L, 200L, 1000L

AARDCURE ECO

An environmentally friendly curing membrane with no hydrocarbon resins or solvents—low odour and ideal for green building projects. Outperforms traditional compounds with high abrasion resistance and over 90% moisture retention.

Available in: 20L, 1000L

CURING COMPOUNDS

EVENCURE EP EZISPRAY

A high-solids, CRS 170-modified bitumen emulsion designed for primer sealing, tack coating, waterproofing, or asphalt prep. No heating or special pumps needed—spray and go with trafficable results in 24 hours.

Available in: 1000L Tote

EVENCURE W30 WAX-BASED CURING COMPOUND

A pigmented wax-based curing membrane formulated for outdoor infrastructure works. Meets AS3799 standards, but not suitable for surfaces requiring after trades—can also serve as a debonding agent.

Available in: 20L, 200L, 1000L

EVENCURE AA EVAPORATION RETARDANT

A low-viscosity, green-dyed alcohol solution that slows moisture loss during the finishing stage of concrete placement. Ideal for hot or windy weather—maintains workability without affecting adhesion or hydration.

Available in: 20L, 200L, 1000L

EVENCURE XDS NXGEN

Danterr's highest-performance water-based curing compound, enhanced with surface densifiers and self-degrading resin. AS3799-compliant and suitable for after trades—ideal for commercial slabs and large-scale pours.

Available in: 20L, 200L, 1000L

EVENCURE BCP BITUMINOUS CURING COMPOUND

A dual-action bitumen emulsion that cures and primes concrete surfaces in one application. AS3799-compliant with 90%+ moisture retention—perfect for roads, bridges, and concrete-to-asphalt overlays.

Available in: 20L, 200L, 1000L

CONCRETE MONITORING SYSTEM

Converge transforms concrete curing with smart, wireless monitoring technology. Using embedded or reusable sensors, it provides real-time data on concrete temperature, strength, and curing progress. Backed by the ConcreteDNA® platform, it replaces guesswork and delays with precision and speed—helping contractors strike formwork, open roads, or tension up to 40% faster.

Designed for projects ranging from post-tension slabs to infrastructure pours, Converge supports compliance, improves safety, and keeps schedules on track.

CONVERGE SIGNAL™

A compact sensor embedded directly into the pour, Signal™ provides continuous concrete strength and temperature data for short- to mid-range jobs. Paired with the Converge Node, it transmits real-time data to the ConcreteDNA® platform for accurate decision-making.

Key Features:

- ✔ Wireless sensor embedded in the concrete
- ✔ 15m range via Converge Node
- ✔ Ideal for slabs, precast, or column pours
- ✔ Eliminates manual break testing
- ✔ View live dashboards and reports via ConcreteDNA®

CONVERGE HELIX™

Long-Range, Reusable Sensor System

Helix™ is a high-performance, reusable sensor solution built for larger pours and complex sites. Transmitting data over 1.5 miles, Helix™ offers AI-powered predictions, on-site calibration, and flexible deployment for ongoing concrete intelligence across your project.

Key Features:

- ✔ Reusable with 1.5-mile transmission range
- ✔ Sensor probes + Helix Gateway system
- ✔ Pre-calibrated or site-calibrated options
- ✔ Ideal for PT slabs, mass pours, and infrastructure
- ✔ Enables multiple sensor setups per project

Explore the Full Curing Range

From blankets to compounds to smart sensors
Danterr has your next pour covered.
