

Bituminous Curing Compound

Bitumen Curing Compound & Primer for Concrete and Asphalt Overlays

Key Features & Benefits

Evencure BCP is a water-based bitumen curing compound formulated to retain moisture in freshly laid concrete, promoting proper hydration and reducing plastic shrinkage. The product also functions as a primer for asphalt and bitumen overlays, making it ideal for bridges, roads, and parking decks.

It complies with AS3799 curing standards by achieving more than 90% water retention and eliminates the need for ponding, hessian, or sheeting. The black cationic emulsion applies easily by spray, roller, or brush and dries quickly to a hard, durable film.

- ▶ Dual-purpose: curing compound and bitumen primer in one
- ▶ AS3799 compliant with ≥90% water retention
- ▶ Eliminates ponding, damp hessian, or sheeting
- ▶ Cationic emulsion suitable for overlays
- ▶ Wax-free formulation – no interference with finishes
- ▶ Easy cleanup with water – no solvent odour
- ▶ Tack-free in 1–3 hours; trafficable in 24 hours
- ▶ Brush, roller, broom, or spray application

SPECIFICATIONS:

Product Code	Description	Pack Qty
110772	Evencure BCP Bituminous Curing Compound 20L	1
101679	Evencure BCP Bituminous Curing Compound 200L	1
