

Wax Based Curing Compound

Wax Based Curing Compound for Fresh Concrete

Evencure W30 is a spray-applied wax-based curing compound designed to retain moisture in freshly placed concrete. Its white, pigmented film improves hydration efficiency while reducing plastic shrinkage and surface cracking. Formulated for indoor and outdoor use, Evencure W30 complies with AS3799, achieving over 90% moisture retention in accordance with Australian standards.

In addition to curing, it can also act as a debonding agent when applied to a concrete sub-base before a structural pour. The film degrades under UV exposure after 30–35 days, depending on thickness and sunlight intensity.

SPECIFICATIONS:

Product Code	Description	Pack Qty
106334	Evencure W30 Wax Base Curing Compound 20L	1
106335	Evencure W30 Wax Base Curing Compound 200L	1
106336	Evencure W30 Water Base Curing Compound 1000L	1

Key Features & Benefits

- ▶ Meets AS3799 for curing efficiency (≥90% moisture retention)
- ▶ Wax-based membrane promotes even hydration and reduces shrinkage
- ▶ White film reflects sunlight, reducing surface temperature
- ▶ Performs as a debonding layer for layered slab construction
- ▶ Easy to apply via spray, roller, brush, or broom
- ▶ Best suited for applications with no after-trade adhesion requirements
- ▶ Film degrades naturally under UV exposure within 30–35 days
