

Aardcure AA – Concrete Evaporation Retarder

Rapid-Action Evaporation Retarder for High-Performance Concrete Finishing

Aardcure AA is a water-based aliphatic alcohol concrete evaporation retarder developed to slow moisture loss from freshly placed concrete surfaces. Formulated to perform in hot, dry, or windy environments, it improves workability during the critical finishing phase and reduces the risk of plastic shrinkage cracking.

With a low-viscosity profile, Aardcure AA can be diluted and sprayed evenly over slab surfaces. It is non-residual, biodegradable, and compatible with colored concrete and surface hardeners.

Key Features & Benefits

- ▶ Reduces moisture evaporation in hot, windy, or low humidity conditions
- ▶ Minimizes risk of surface shrinkage and cracking
- ▶ Water-based and solvent-free; no impact on hydration or bond strength
- ▶ Improves surface finish and workability
- ▶ Non-toxic, non-staining green fugitive dye
- ▶ Will not interfere with coatings, toppings, or sealers
- ▶ Compatible with stencil, mat, or dry shake applications
- ▶ Easy to dilute, spray, and clean

SPECIFICATIONS:

Product Code	Description	Size
133151	Aardcure AA Evaporation Retardant	20L
133172	Aardcure AA Evaporation Retardant	200L
