

Aardcure Catalyst – Concrete Durability Enhancer

Concrete Durability Enhancer

Key Features & Benefits

Aardcure Catalyst is a penetrative, chloride- and silicate-free concrete durability enhancer formulated to protect and restore concrete. It increases surface hardness, reduces permeability to water and chemicals, and strengthens the adhesion of applied finishes.

Suitable for both new and existing concrete, Aardcure Catalyst helps mitigate dusting, cracking, and reinforcement corrosion—supporting long-term infrastructure performance with proven results lasting over 10 years.

- ▶ Densifies and hardens the concrete surface
- ▶ Increases abrasion and chemical resistance
- ▶ Reduces hydrostatic pressure internally
- ▶ Minimises water loss by ~20% during curing
- ▶ Restores corrosion protection for reinforcement steel
- ▶ Enhances primer adhesion for cementitious coatings
- ▶ Compatible with new and aged concrete
- ▶ VOC Compliant (<10g/L), non-film forming
- ▶ Fast drying and trafficable when surface is dry

SPECIFICATIONS:

Product Code	Description	Size
133821	Aardcure Catalyst (Primer)	20L
