

Zemdrain® MD

Zemdrain® MD CPF Liner for Concrete Surface Control

Zemdrain® MD is a reusable CPF liner that supports strong surface performance in concrete structures. It uses a polypropylene membrane on the concrete side and a structured drainage grid on the formwork side. This system encourages controlled moisture movement, helping create dense surfaces with reduced blowholes. Zemdrain® MD is suited to large projects where consistent results across multiple pours are needed. It may be reused two or three times when site conditions allow.

Key Features & Benefits

- ▶ Reusable CPF liner for 2-3 pours
- ▶ Membrane designed for a smooth to lightly textured surface
- ▶ Drainage grid guides moisture away from the concrete face
- ▶ Supports large wall sections and repeat formwork cycles
- ▶ Helps reduce blowholes and surface laitance
- ▶ Suitable for vertical, horizontal, and angled applications
